Unity Version

Instal Unity 2019.4.28f1 or higher version to load up the project

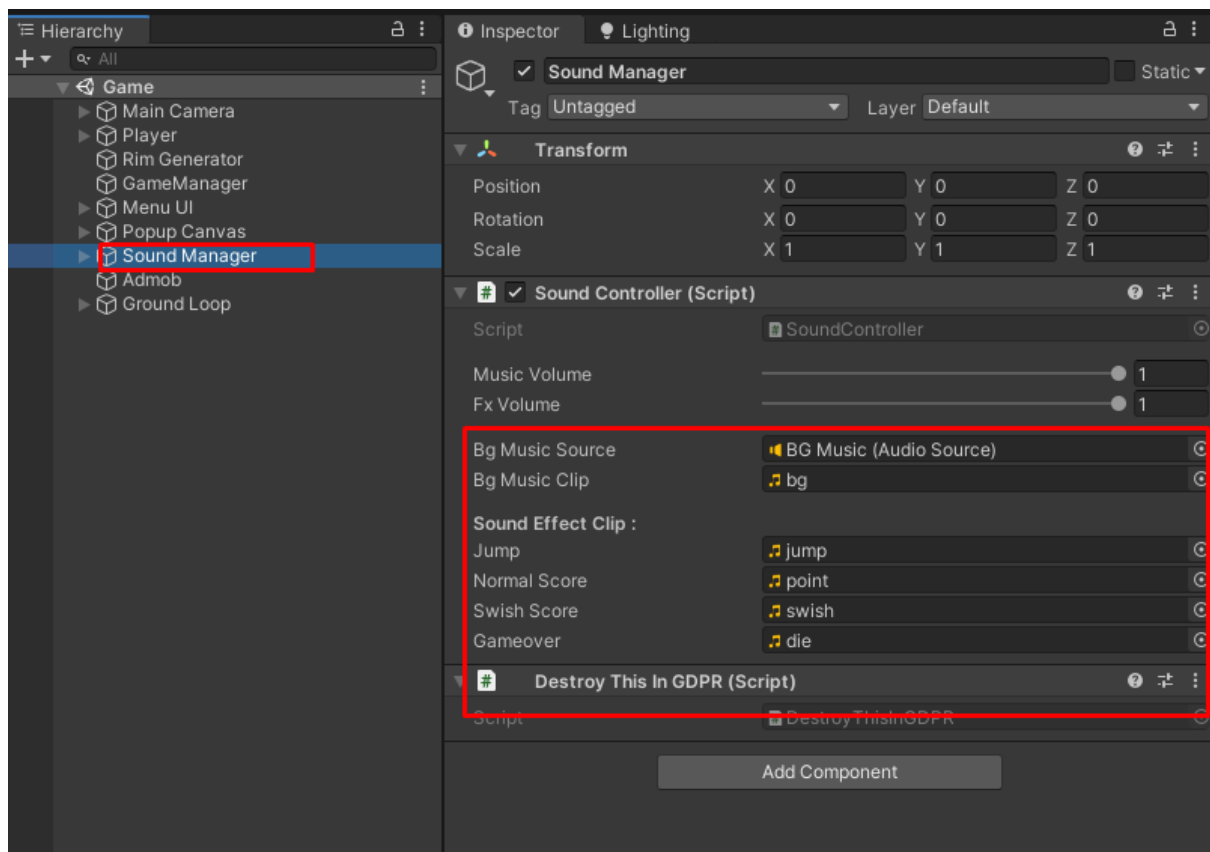

Prepare the Project

Watch this video to prepare your project before doing customization.

<https://youtu.be/TxDFMP6Fbb4>

How to change game sounds

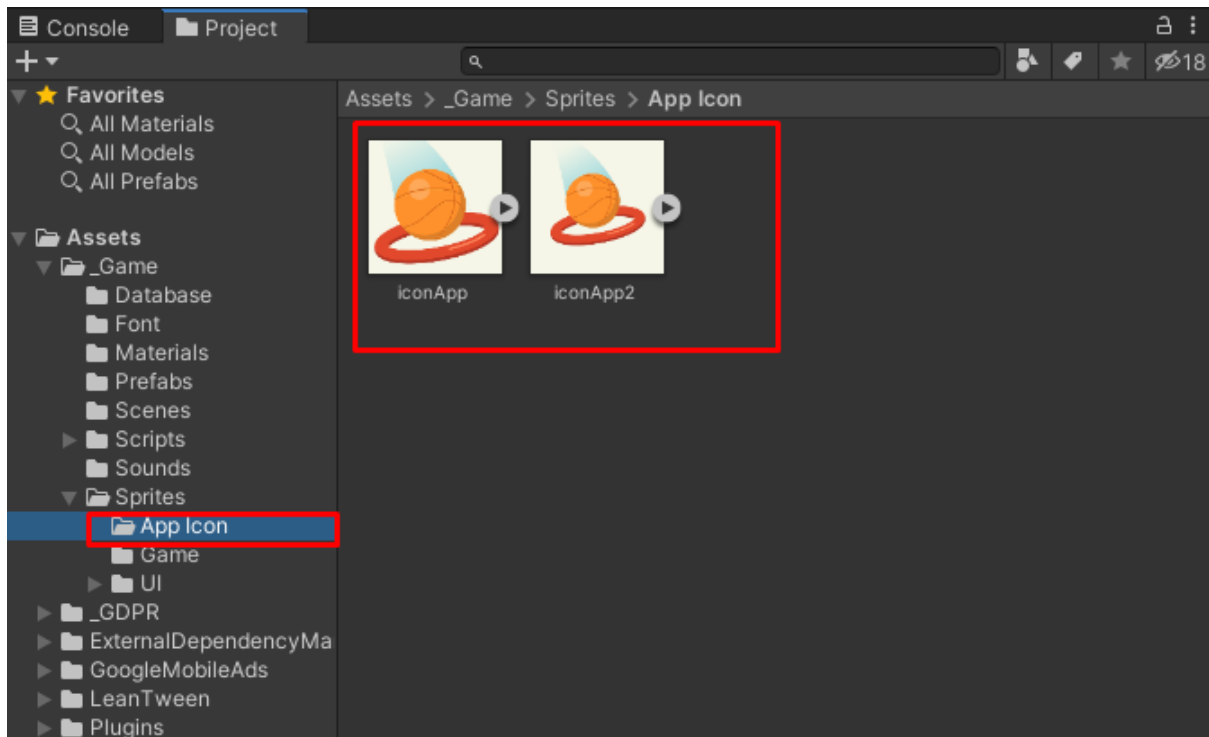

Go to Hierarchy and select **Sound Manager**. Replace the sound in the Inspector with your sound.

Drag and drop audio file from **Project Window** to the **Inspector** to replace it.

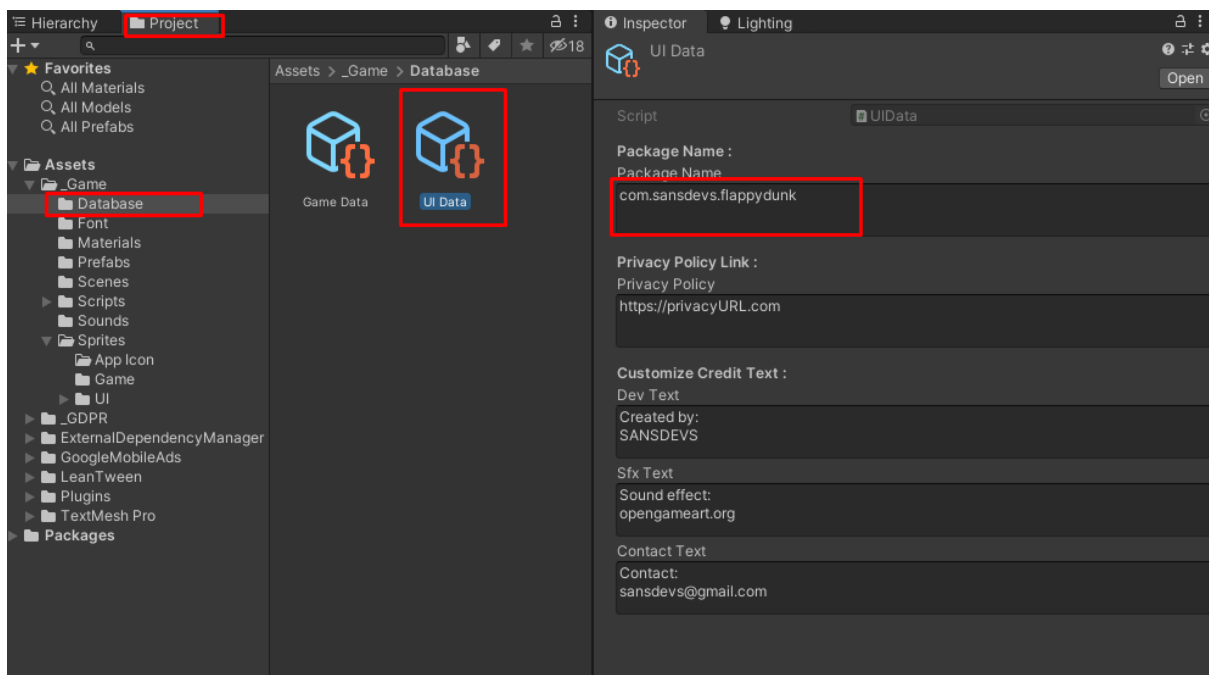

How to Change Game Icon.

Go to Project window and find folder **Assets/_Game/Sprites/App icon**. You can change the game icon by replacing them with your image file.

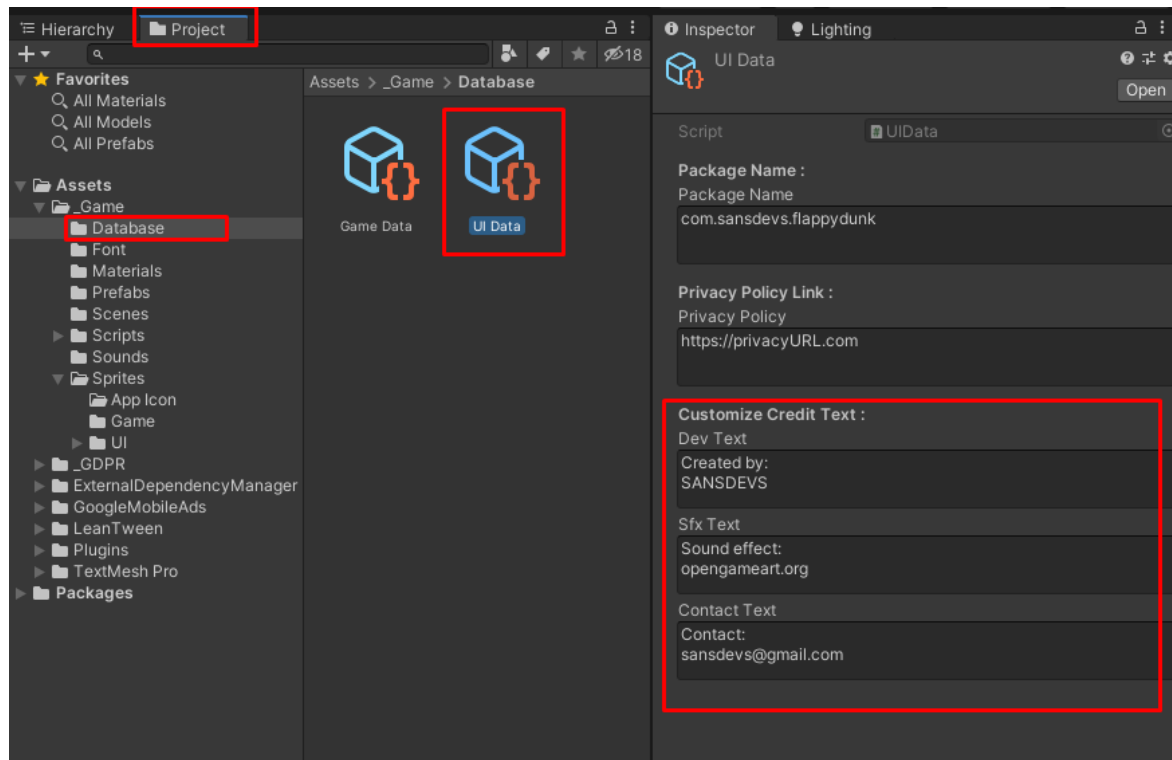

How to customize the rating page link

Go to Project file and find folder **Assets/_Game/Database/**. Select **UI Data** and then fill the Package Name with your App Package Name in the Inspector.

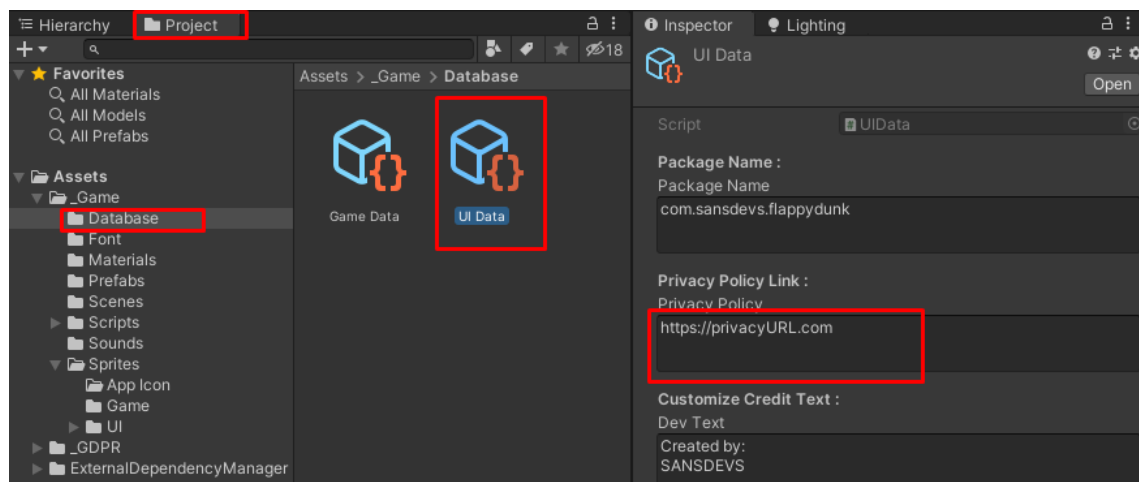

How to customize About Us Panel

Go to Project file and find folder **Assets/_Game/Database/**. Select **UI Data** and fill your credit in the **Inspector**.

How to customize Privacy Policy page link

Go to Project file and find folder **Assets/_Game/Database/**. Select **UI Data** and fill your Privacy Policy URL in the **Inspector**.

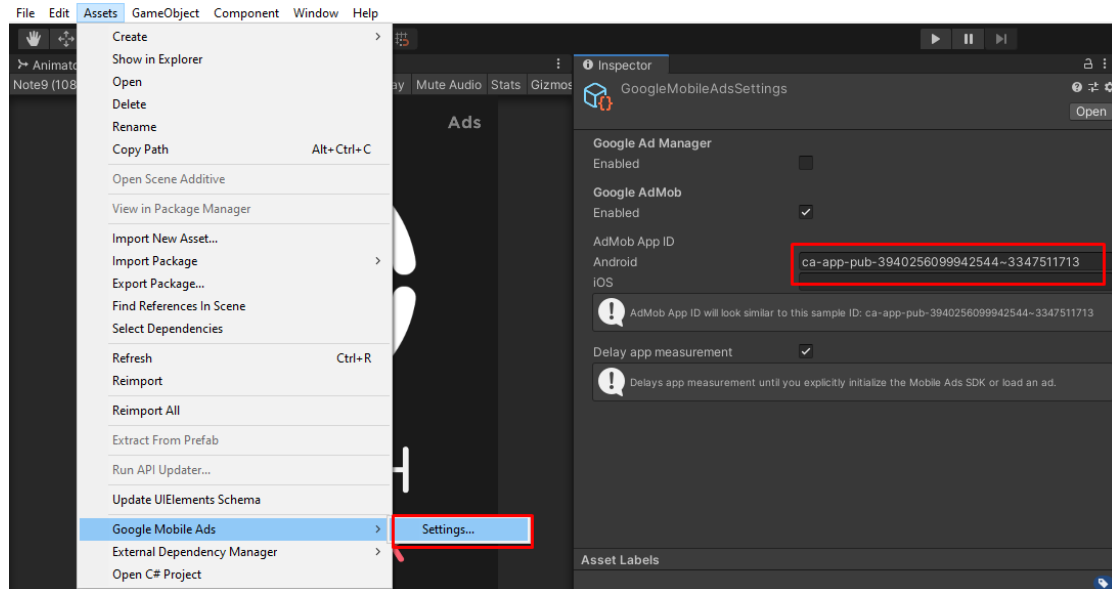

How to Add Splash Screen

You can watch this video on how to add Splash Screen in your game.

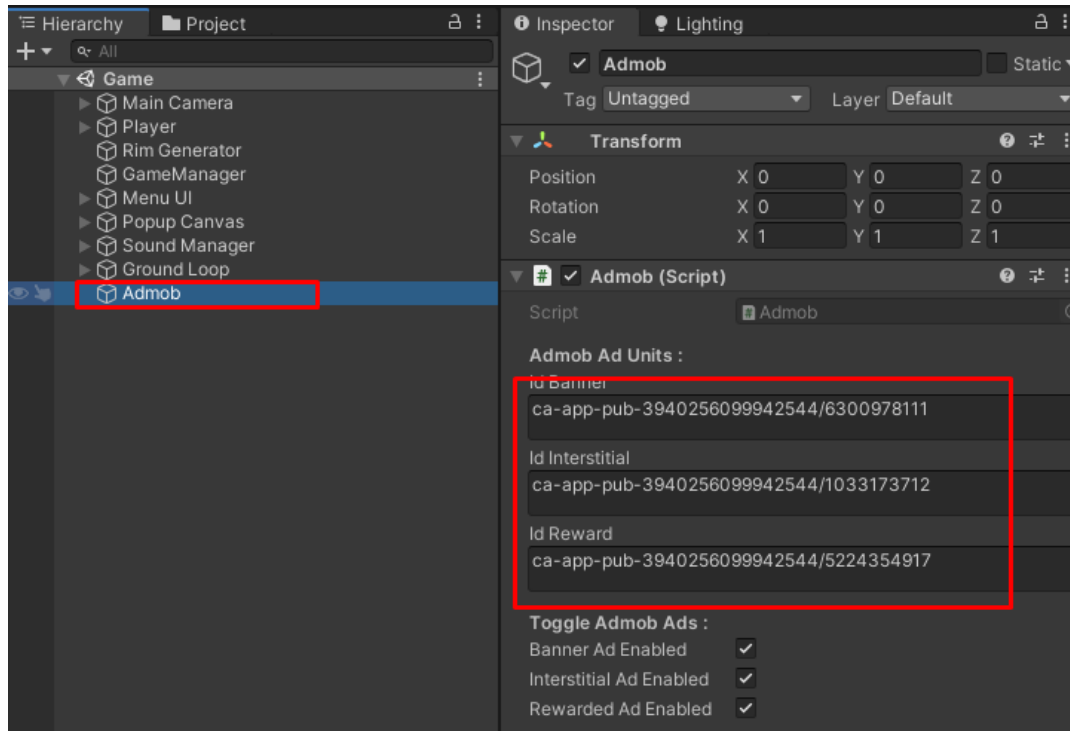

<https://youtu.be/LOxDg692fWM>

How to set Admob Ads

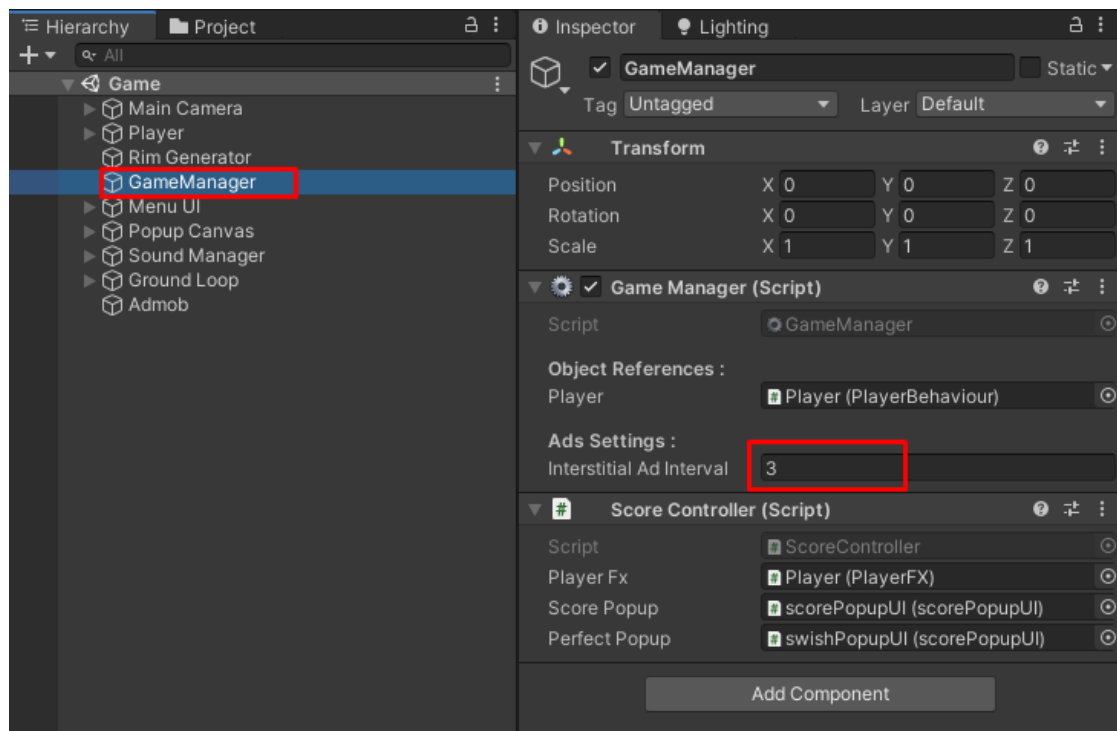

1. Go to Assets in Menu Bar. Select **Google Mobile Ads > Settings..** and then Look at the Inspector and **Enabled** checkbox under **Google AdMob** and Fill your AdMob App ID for Android.

2. Go to Hierarchy and select **Admob** gameobject. Look at the Inspector and fill your ad unit id (banner and interstitial).

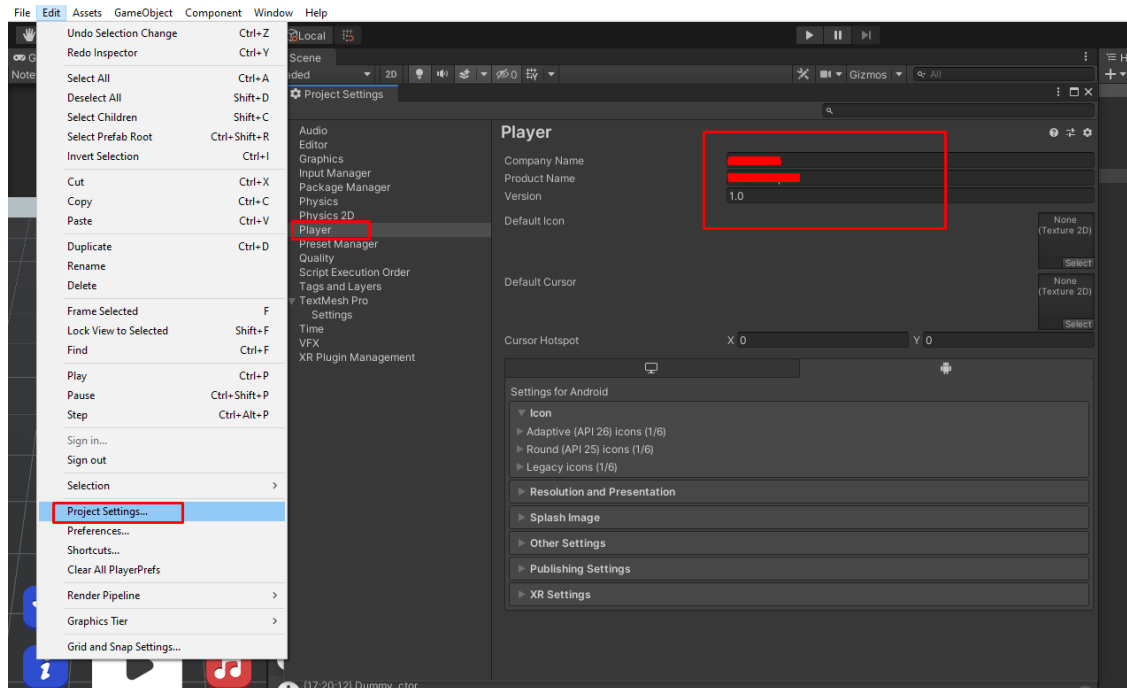

3. You can adjust the number of interstitial ad views per several games by selecting **Game manager** in the Hierarchy and then fill **Interstitial Ad Interval** in the Inspector

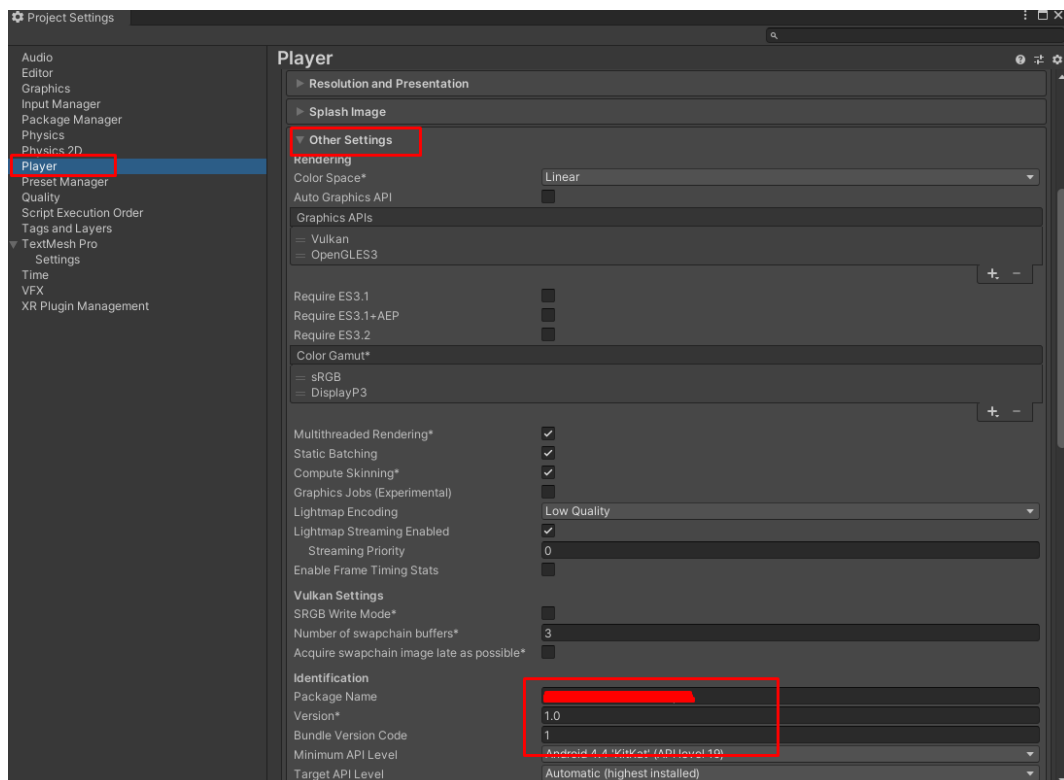

for example, if you fill **3** in the **Interstitial Ad Interval**, it means the interstitial Ad only show every 3 games.

How to get Android App Bundle (.aab file) ready to publish

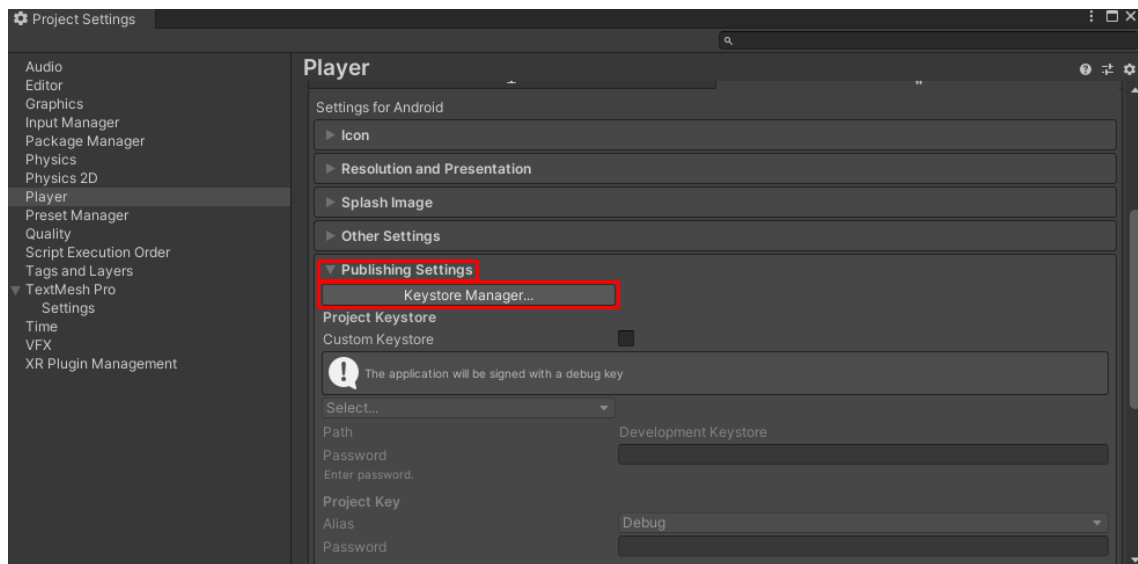

1. Go to **Edit** in Menu Bar and select **Project Settings..** to open Project Settings window. In Project Settings window, select **Player** on the left panel and then fill your company name, product name & version.

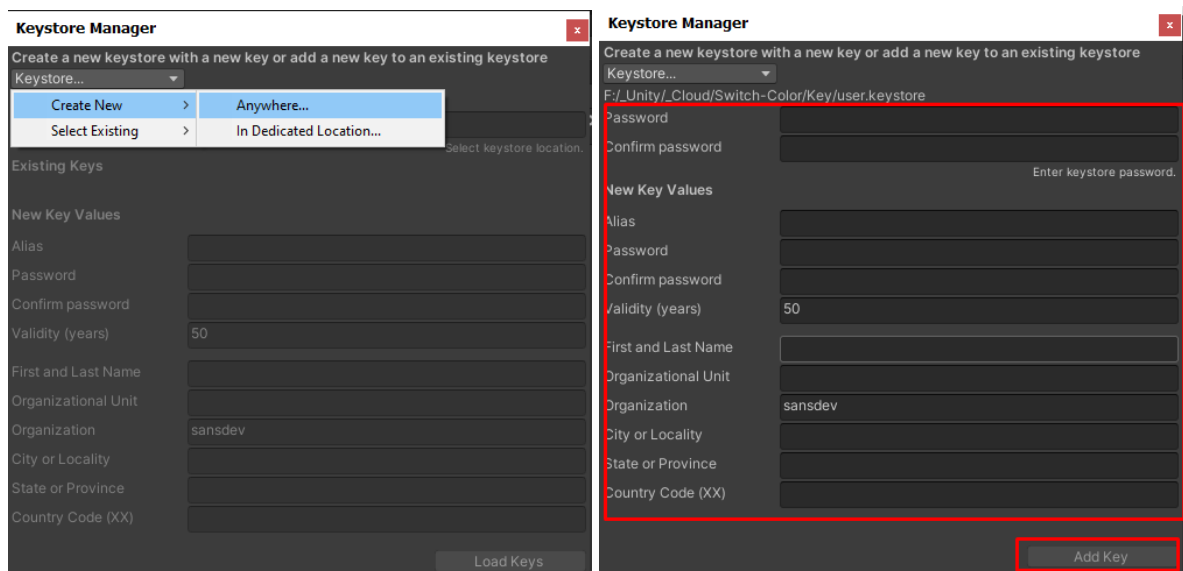

2. And then, click **Other Settings** to open a menu within it, scroll down until you find the **Package Name** and Fill your App Package Name there.

- To create a Key, Scroll down again and find **Publish Settings**. Click Publish Settings to open a menu within it, and then select **Keystore Manager..** to open Keystore Manager Window

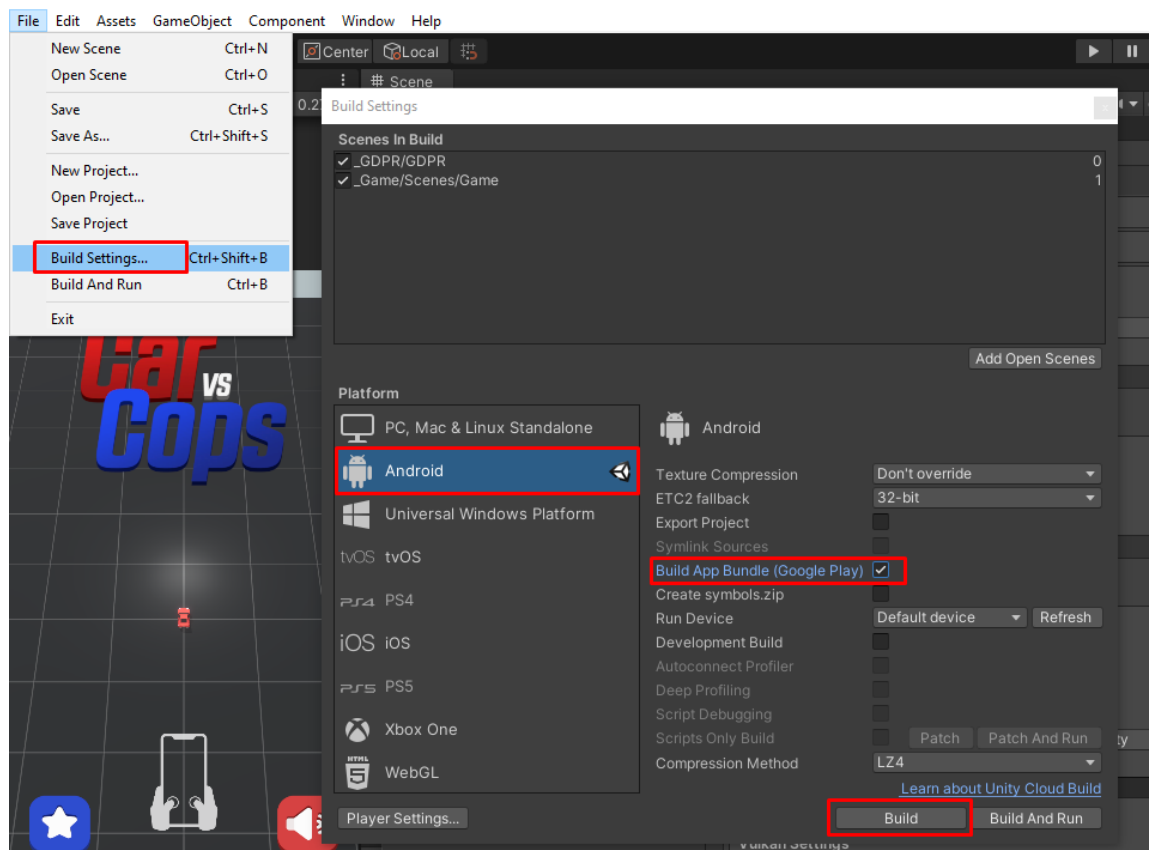

- In Keystore Manager Window, select **Keystore > Create New > Anywhere..** to locate keystore save location in your directory and then, fill your key data and click **Add Key** to save your keystore.

5. You can now build your Android App Bundle(.aab file) by selecting **File > Build Settings..** and then click Build in the **Build Settings** window.

Make sure to enable the checkbox **Build App Bundle (Google Play)** to export Android App Bundle (.aab File).

Regards,
